## Boggie #01 – Occurrence #002

Live EMF Plotter 3.0 by AmFile.org August 2025  
Scope: 109800 to 110959 (8/5/2025 17:22:08 to 8/5/2025 17:41:27 )

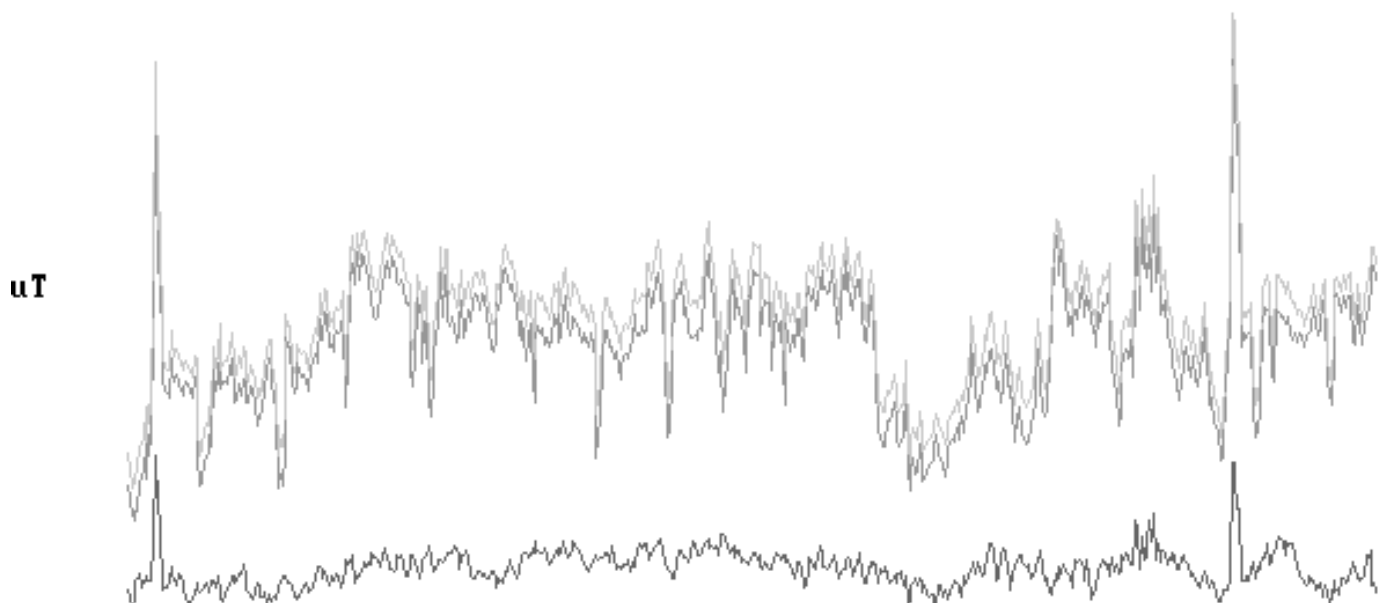

Peak X: .012 Y: .182 Z: .458 M: .489 uT  
X: Dark Gray, Y: Medium Gray, Z: Light Gray, Mag: Lighter Gray  
[H]elp [P]rint Mode

There are two almost identical artifacts from the scope of EMF ELF logs (20hz to 0.1hz in mag uT readings at 1sec resolution.) that occurred twice in two days of loggings. Once in the morning and again in the evening of the following day. This may be the boogie signal.
